

Dartmouth SIAM Student Chapter Presents

Graduate School Applications: The things you want to know and more

Abstract: Where should I apply? What test should I have to take? When should I take them? What are schools looking for in graduate students? These are just some of the questions that you will ask yourself when applying to a mathematics graduate program. In this talk, we will answer these questions and discuss what to expect after application has been handed in.

There will be plenty of time to answer additional questions.
